Question 10.13.3.40

A Lot consists of 48 mobile phones of which 42 are good, 3 have only minor defects and 3 have major defects. Varnika will buy a phone if it is good but the trader will only buy a mobile if it has no major defects. One phone is selected at random from the lot. What is the probability that it is

- 1) acceptable to Varnika?
- 2) accepatble to the trader?

Solution: Then

X_1	0	The mobile is good
	1	The mobile has major defects
	2	The mobile has minor defects

1) Varnika buys a mobile

Varnika buys if the mobile is good

$$Pr(X_1 = 0) = \frac{42}{48}$$
 (1)
= $\frac{7}{2}$ (2)

2) Trader will buy a mobile

The trader buys if the mobile does not have major defects

$$1 - \Pr(X_1 = 1) = 1 - \frac{3}{48} \tag{3}$$

$$=\frac{15}{16}\tag{4}$$
